is Shaped to Fit*
Today's Custom Homes

Blow-in-
BLANKET
CONTRACTORS ASSOCIATION

PREMIER INSULATION.

Works with any blueprint Fits any configuration.

Cavities. Curves. Vaulted ceilings. Crawl spaces. Custom windows. The Blow-In-Blanket System (BIBS®) is a proven, time-tested, premium insulation that fits any configuration, any custom situation, any size home. It blows in easily, fills completely and lasts for the life of your home.

Fills gaps and voids for thermal efficiency.

Unlike other insulation systems that may leave voids or gaps, the Blow-In-Blanket System completely fills the space which controls sound and reduces air infiltration in the wall cavity. So your house is snug, secure, thermally-efficient and draft-free.

Safe and easy to install.

Developed by Ark-Seal over 20 years ago, BIBS is the most widely accepted and independently tested blown-in wall system used today. Little wonder—it's easy to apply, clean, fast and effective. It's also fire-resistant, moisture-resistant and does not attract or act as sustenance for animals. And because BIBS uses noncombustible fiber glass, there are no chemicals or noxious odors over time.

With the Blow-In-Blanket System, loose-fill insulation is blown behind netting using specific installation techniques. BIBS is licensed by Ark-Seal to independent contractors so only qualified installers can apply it. And only approved insulation products may be used. These include: Johns Manville Climate Pro® and CertainTeed InsulSafe®4 or OPTIMA®.

Optimum comfort and performance.

It's simply superior, from top to bottom. In addition to sidewalls and metal framing, Blow-In-Blanket System is ideal for under floors, in ceilings and wherever acoustic control is needed. BIBS is the perfect insulation for today's custom homes. It offers outstanding thermal performance and high R-values, cutting utility bills and leaving you with an energy-efficient home. It never settles or separates, corrodes pipes or wires, or produces mold or mildew.

CERTIFIED INSTALLATION.

Insulation is only as effective as its installation. If voids and gaps are left unfilled, heat and sound will travel, negating much of your insulation's protective benefits. It's not only essential to use the best quality materials, but it is also necessary to have tradesmen trained and certified to install properly.

Specialized training. BIBCA backing.

The Blow-In-Blanket Contractors Association (BIBCA) is an international trade association of industry professionals who are dedicated to installing a quality product. BIBCA members voluntarily pledge to abide by a strict set of rules and by-laws. Installers, managers, owners, fiber producers, machine manufacturers and others who support BIBCA's philosophy are eligible to earn BIBCA certification through classroom and applied training time.

You can be certain when it's certified.

The Installer Certification Training Program was developed to support the homeowner and provide peace of mind. BIBCA's trained installers continually test their applications to ensure the Blow-In-Blanket System is properly installed, guaranteeing the highest R-values attainable in typical sidewall applications today. Certified BIBCA personnel are also experienced in thermal insulation, sound attenuation, air infiltration, moisture migration and ventilation.

Results you'll feel comfortable with.

No other product is as critical to the overall comfort and energy efficiency of a home than insulation. The Blow-In-Blanket System offers exceptional advantages and certified installers who know the correct density and R-values for your area. BIBS is an advanced, eco-friendly, custom-fit process that uses specially manufactured blowing wools to fit your goals, budgets and blueprints.

There is no substitute for the quality and longevity of BIBS installed by BIBCA professionals. For more information, contact BIBCA at 1-800-451-8862 or visit our website at www.bibca.org.

Benefits of the Blow-In-Blanket System.

- Works with any blueprint.
- Fits any configuration
- Ideal for irregular and nonconforming areas: custom windows, cathedral ceilings, arches
- Fills gaps and voids completely
- Offers outstanding exterior and interior sound control
- Clean, virtually dust-free, blows in easily
- Long-lasting: won't settle, rot, decay, attract insects or animals
- Fire-resistant, moisture-resistant, chemical-free
